UNDERGROUND SPACE

Index, Volume 9 **January-December, 1985**

This index lists feature articles, papers, editorials, and interviews appearing in *Underground Space,* Volume 9, January–December 1985. The entries are arranged in the following categories:

I. General Articles
II. Tunnels and Deep Space
III. Earth Shelter and Architecture
IV. Planning, Development, and Public Policy

VOL. 9 1985

I. General Articles

Cooper, D.F., and Chapman, C.B. An overview of risk analysis for underground projects; 9:1, 35–40.

Lappegaard, R. A message for the AUA president; 9:1, 2.

Nelson, S. A message from the new executive director of the AUA; 9:5–6, 242.

II. Tunnels and Deep Space

Babendererde, S. Tunnel lining methods; 9:5–6, 276–279.

Boc, R., Miller, J., and Gillis, D. Passaic River Basin drainage project: tunnel plan and public program; 9:1 29–34.

Bruhn, R.W. Case report: coal mine subsidence in Farmington, West Virginia; 9:5–6, 261.

Cotton, T. Managing the nation's commercial high-level radioactive waste; 9:5–6, 264–272.

Duddeck, H., and Erdmann, J. On structural design models for tunnels in soft soil; 9:5–6, 246–259.

Gillis, D. What will become of North Amercian tunneling? 9:2–3, 73–74.

Healy, T. Seattle transit tunnel: UMTA's top-priority new project; 9:2–3, 138–142.

Holzer, T. Land subsidence: its impact and cost in the U.S.; 9:5–6, 260–263.

Loofbourow, R.L. Effects of seismic movement on underground space, with special reference to Kansas City, Missouri; 9:4, 225–229.

O'Rourke, T.D. UTRC study: design of tunnel linings; 9:2–3, 102–108.

Proctor, R.J., and Hammond, D.G., and Monsees, J.E. Los Angeles metro rail project: overview and challenges; 9:2–3, 120–125.

Rose, D. Conceptual layouts for very long tunnels; 9:2–3, 83–92.

Robbins, R.J. What lies ahead for mechanized tunnel excavation?; 9:2–3, 93–96.

Sandell, D.H., Goyal, B.B., and Sylvester, A.U. Large twin underground caverns for TARP's mainstream pumping station; 9:2–3, 126–130.

Smirnoff, T.P., and Lundin, T.K. Jones Island inline pump station: design and construction considerations; 9:2–3, 131–137.

Waggoner, E.B., and Daugherty, C.W. USNC/TT study: geologic site investigations for tunnels; 9:2–3, 109–119.

Williams, R.E. Cavities and tunnels in hard rock by thermal spallation; 9:5–6, 273–275.

III. Earth Shelter and Architecture

Asanga, C.T., and Mills, R.B. Changes in environment, grain quality, and insect populations in pearl millet stored in underground pits; 9:5–6, 316–321.

Behr, R., and Kiesling, E.W. Estimated cost of earth-covered arch and dome shells; 9:1, 45–50.

Carmody, J., Meixel, G., and Shen, L. Parametric studies of roof, wall, and floor components; 9:4, 199–209.

Dunkel, F.V. Underground and earth-sheltered food storage: historical, geographic, and economic considerations; 9:5–6, 310–315.

Goldberg, L. Earth-contact heat transfer in underground buildings: a research perspective; 9:1, 3.

Labs, K. Characteristics of building foundations; 9:4, 171–191.

Labs, K. Simplified earth-contact heat transfer algorithms for thermal analysis and design; 9:5–6, 293–309.

Laufer, A. Economic comparison of prefabricated box and on-site reinforced concrete casting construction methods; 9:1, 41–44.

Sterling, R. The role of building foundation research in the thermal performance of buildings (editorial); 9:4, 169–170.

Sterling, R., Meixel, G., and Shen, L. The impact of insulation of building foundations on U.S. national energy consumption; 9:4, 192–198.

Stone, T.S. Architectural design for an earth-sheltered farrowing house; 9:4, 230–232.

IV. Planning and Development

Frost, T. Safety criteria for underground developments; 9:4, 210–224.

Heim de Balsac, R. The history of GECUS: a great adventure in contemporary urban development; 9:5–6, 280–287.

Human Interference Task Force, and Gillis, D. Preventing human intrusion into high-level nuclear waste repositories; 9:1, 51–59.

Kellogg, J.C. The role of underground space in infrastructure renovation and development; 9:2–3, 97–101.

Lemmeke, L. Seasonal storage of solar heat with large-scale heat pumps; 9:1, 16–22.

Leoni, L. Water-filled abandoned mines as a heat source for district heating, 9:1, 23–27.

Nelson, S. Legal and economical feasibility of mined underground space in Minneapolis, Minnesota; 9:2–3, 143–147.

Nelson, S., and Rockenstein II, W.H. Legislating underground space use: Minnesota's mined space development act; 9:5–6, 289–292.

Rockenstein II, W.H. The city of Minneapolis' authority to develop mined underground space: a case study of the development of legislative policy in Minnesota; 9:2–3, 148–152.

Schilling, A.H. Radioactive waste repositories: community impacts and involvement; 9:2–3, 153–159.

Walton, M. Seasonal thermal energy storage (STES); 9:1, 5–15.
